Heart treatment by dissolving the clot in the artery

2459. SHRI MUKHTIAR SINGH MALIK: Will the Minister of HEALTH AND FAMILY WELFARE be pleased to state:

(a) whether a new treatment for heart attack by dissolving the clot in the arteries was discussed in details at the national workshop held in New Delhi during the third week of September, 1985;

(b) what decisions were arrived in the workshop; and

(c) if so, what is the number of patients who were treated in the workshop?

THE DEPUTY MINISTER IN THE DEPARTMENT OF FAMILY WELFARE (SHRI KRISHNA KUMAR): (a) Yes, Sir.

(b) The following conclusions were arrived at:—

(1) Thrombolytic Therapy (clot dissolving treatment) mark a significant advance in the treatment of acute heart attack since the advent of coronary care units in early sixties when the mortality rate (in hospital death rate) was reduced to some extent. There is evidence that with this new treatment the death rate can be reduced from 25—30 per cent to about 8 per cent.

(2) There is definite improvement in the function of the heart during the following 1½ years.

(3) Younger patients benefit most during their first heart attack.

(4) After the Thrombolytic Therapy, status of coronary arteries becomes better than before heart attack.

(5) After this Therapy need for bypass surgery is reduced or in some cases useful time is gained. Bypass surgery if required after this Therapy, becomes simpler.

(6) Post-Attack complications are usually absent after this Therapy.

(7) More studies with coronary angiography before and after the Thrombolytic Therapy and late follow-up are indicated.

(c) No patient was treated in the workshop.
